1 Meet Copper Home

Copper Home is the desert-smart assistant for the whole household. It answers questions, runs your smart home, remembers what matters, and keeps an eye on the Arizona weather. Wake it by saying **"Hey Copper."**

1.1 What's in the box

- Copper Home speaker
- Power adapter with a 6-foot cable
- Quick start card

1.2 Parts of your Copper Home

Part	Where it is	What it does
Round display (3-inch)	Upper front	Shows the time, the weather, and a small copper robot when Copper is listening
Light ring	Around the display	Shows what Copper is doing. See page 6
Action button	Top	Tap to wake Copper without the wake word; tap again to stop an alarm or timer
Volume buttons (+ and -)	Top, either side of the action button	Change the volume
Mute slider	Back	Turns the microphones off. A red privacy light glows on the front
Power port	Back, near the base	Connect the power adapter
Copper base ring	Bottom	Polished copper trim

Copper Home comes in three fabric colors: Polished Copper, Patina Teal, and Night Sky. It has no battery and must stay plugged in.

2 Set up Copper Home

2.1 Before you start

- The Copper app on an iPhone or Android phone
- Your home Wi-Fi name and password (2.4 GHz or 5 GHz)
- A spot within reach of an outlet, away from the sink and the stove

2.2 Setup steps

1. Plug in Copper Home. After a few seconds the light ring **flashes blue**: it's in setup mode.
2. Open the Copper app and tap **Add Device**.
3. Choose **Copper Home** and follow the prompts.
4. Pick your Wi-Fi network and enter the password.
5. Name the room Copper Home is in, for example "Kitchen."
6. When the light ring turns soft white, say **"Hey Copper, what's the weather?"** to test it.

> **NOTE** The light ring flashing blue for more than 10 minutes means setup didn't finish. Unplug Copper Home, plug it back in, and start again in the app.

2.3 Updates

Copper Home updates itself overnight when it's connected to Wi-Fi. To check your version, open the Copper app and go to **Devices > Copper Home > About**. This guide covers Copper 2.3.

3 Wi-Fi and connection

Copper Home needs Wi-Fi for everyday questions, smart-home control, and updates. Simple commands like timers keep working without it.

3.1 Reconnect to Wi-Fi or change networks

1. Open the Copper app.
2. Go to **Devices > Copper Home > Wi-Fi**.
3. Tap **Change network**.
4. Choose your network and enter the password. The light ring flashes blue while Copper Home connects.

If you changed your router or your Wi-Fi password, do this right away. Copper Home can't find the new network on its own.

3.2 Tips for a strong connection

- Keep Copper Home within about 30 feet of your router, with few walls in between.
- Keep it off the floor and away from microwaves and metal cabinets.
- If your router has separate 2.4 GHz and 5 GHz networks, the 2.4 GHz one reaches farther.

NOTE Error **C-12** means Copper Home lost its Wi-Fi connection or the password is wrong. See page 9.

4 Talking to Copper

Say **"Hey Copper"** and then your request. The light ring turns Sonoran Sunset orange while Copper listens. Copper understands **English and Spanish**.

4.1 Things to try

You say	What happens
"Hey Copper, set a timer for 10 minutes."	Handled on the device, even without Wi-Fi
"Hey Copper, turn off the lights."	Handled on the device
"Hey Copper, what's the weather this weekend?"	Answered in the Copper Cloud
"Hey Copper, add milk to the list."	Added to your shopping list in the app
"Hey Copper, plan a 3-day Sedona trip for two kids who hate hiking."	A complex request. With Copper Plus, Copper uses Refined answers

4.2 Everyday answers and Refined answers

Most questions are answered by Raw Ore, Copper's everyday cloud model. With a **Copper Plus** subscription, complex questions and planning get **Refined** answers from more advanced models. Copper decides which to use for each request. See the Copper Plus FAQ for details.

4.3 When Copper isn't sure

Since Copper 2.2, Copper says "I'm not sure" instead of guessing. Check important information, like medical, legal, or money questions, with a trusted source.

5 Lights, buttons, and sounds

5.1 Light ring

Light ring	What it means
Soft white	Ready and idle
Sonoran Sunset orange	Listening
Patina Teal, swirling	Thinking: a cloud request is in progress
Flashing blue	Setup mode
Red, flashing	Error. Check the app for an error code and see page 9

5.2 Red privacy light

A small **red privacy light** on the front means the microphones are off because the **mute slider** on the back is on. Copper can't hear the wake word while muted. Slide it back to turn the microphones on.

5.3 Buttons

Button	Press	Result
Action	Tap	Wake Copper without saying "Hey Copper"
Action	Tap while ringing	Stop an alarm or timer
Volume + / -	Tap	Change the volume
Volume - and Action together	Hold 15 seconds	Factory reset (see page 9)

6 Household Memory and privacy

6.1 Household Memory

Copper can remember things for the whole household. Say **"Copper, remember the pool guy comes Thursdays."** Later, ask "When does the pool guy come?"

- To forget something, say "Copper, forget the pool guy."
- To see or delete every memory, open the Copper app and go to **Memory**.
- Memories are kept for **30 days** on the free plan and **12 months** with Copper Plus. You can delete them anytime.

6.2 What Copper hears and saves

- Copper Home listens on the device for "Hey Copper." **Nothing is sent to the cloud until it hears the wake word.**
- After the wake word, your request (audio and text) is sent to the Copper Cloud and **saved**: 30 days on the free plan, 12 months with Copper Plus.
- You can review and delete your requests anytime in the Copper app under **Privacy > History**.
- Copper State Labs does not sell your recordings, and doesn't use them to train models unless you opt in.

> **NOTE** Want a break? Slide the mute switch on the back. The red privacy light means the microphones are off.

7 Smart home and Arizona features

7.1 Smart-home control

Copper Home controls lights, thermostats, sprinklers, and garage doors. Add them in the Copper app under **Devices > Add smart-home device**. Some older thermostats need their own app linked first; follow the prompts in the Copper app.

7.2 Arizona features

Feature	What it does
Monsoon Mode	Storm alerts, and automatically pauses your sprinklers when rain is coming
Haboob Alert	Warns you about incoming dust storms and reminds you to close the windows
Heat Check	Alerts you when it's dangerously hot, and reminds you to bring pets inside and check the back seat before you leave the car
Snowbird Mode	Pauses your routines and checks in on the house while you're away for the summer
Arizona time	Most of Arizona doesn't use daylight saving time, and Copper knows it (fixed in Copper 2.1). The Navajo Nation does observe daylight saving time

Turn features on or off in the Copper app under **Devices > Copper Home > Features**.

8 Troubleshooting and error codes

When the light ring **flashes red**, Copper Home has a problem. The Copper app shows an error code.

Code	What it means	What to do
C-12	Wi-Fi connection lost, or the Wi-Fi password is wrong	Re-enter your Wi-Fi details in the Copper app (page 4). Move Copper Home closer to the router
C-47	Microphone array fault	Unplug Copper Home for 30 seconds, then plug it back in. If C-47 keeps coming back, contact the Copper Crew
C-90	Software update failed	Keep Copper Home connected to Wi-Fi and retry the update in the Copper app

8.1 Common problems

Problem	Try this
Copper wakes up when the TV is on	Something on TV sounded like "Hey Copper." Move Copper Home farther from the TV, or slide the mute switch during shows
Copper doesn't respond	Check for the red privacy light (muted). Make sure the light ring isn't flashing red
Smart-home device not found	Make sure the device works in its own app, then add it again in the Copper app

8.2 Factory reset

A factory reset erases your settings and returns Copper Home to setup mode. Hold the **volume-down button and the action button together for 15 seconds**, until the light ring flashes red three times. Then set it up again (page 3).
